

# Explanation

I helped with the design of most pages giving input and doing quick tests with people around us. I helped create a more usable graph page, upload pages, and data page. I helped decide what would be the most intuitive for users to use the app.

I helped choose the designs we would use in our final design. We ended up deciding on using the third one because of the gorilla testing I did while in class.

# Gorilla Testing

## Sam

Feedback: Liked all of the designs but thought that the **third one** seemed to indicate better what was clickable and what is important information while keeping with the style of the rest of the site.

## Luka

Feedback: Liked the designs that were simple and said that the **fourth one** is the best for usability.

## Giada

Feedback: Liked the simple designs but mainly focused on the **third one** because it seemed to make the most sense and liked that the text was white for the header.

## Ivan

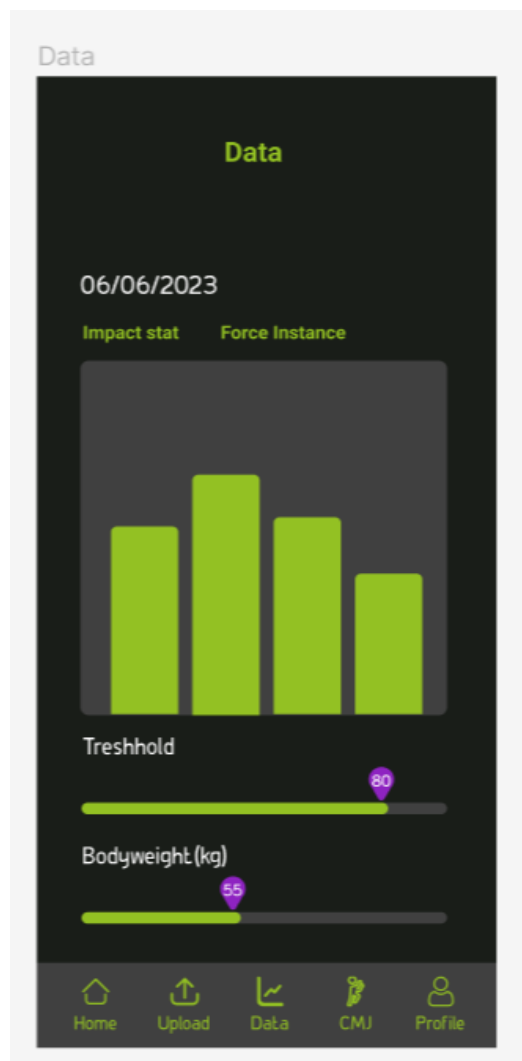

Feedback: Liked all of the designs but liked the green more than the purple so anything purple was out so the **fourth one** was what he would have chosen.

## Denis

Feedback: He liked the **third one** because it made the most sense in usability wise it was the most intuitive and shows the important information in a different color.

# Graph

Creating the most optimum graph design. I used my previous research and some small competitor analysis to decide what was the best design for making a threshold and viewing it on a graph most usable. After doing a competitor analysis about different designs for graphs and having thresholds we decided that the best design to go for would be something like this where the user is able to control it easily and be able to see the exact number as it's moved.

| Competitor       | Positives                                                                                                                                                                                                                                        | Negatives                                                                                                                                                                         | Description                                                                                                                                                       |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Starva           | <ul style="list-style-type: none"><li>• Clean easy to read design.</li><li>• Able to read lots of different information.</li></ul>                                                                                                               | <ul style="list-style-type: none"><li>• Changing settings or viewing specific data is confusing.</li></ul>                                                                        | Although you are able to see a lot of information in one place the information that you want to be able to see is only possible behind a confusing settings menu. |
| Fitbit App       | <ul style="list-style-type: none"><li>• Very clean and simple design</li><li>• Anyone can use it</li><li>• Gives a lot of important targeted information.</li></ul>                                                                              | <ul style="list-style-type: none"><li>• Some information is only available on their website.</li><li>• Most of the more detailed information is more confusing to find.</li></ul> | A lot of very specific information is available but finding more complex information is a bit harder and maybe requires looking at the website.                   |
| MyFitnessPal     | <ul style="list-style-type: none"><li>• Great design simple and really usable.</li><li>• Bar makes it much more simple and easy to read.</li><li>• A lot of information is available all throughout the app in a simple viewable form.</li></ul> | <ul style="list-style-type: none"><li>• Could be designed to be more fun to use.</li><li>• The app is very technical and not super enjoyable to use.</li></ul>                    | Overall great app with amazing ways of displaying data in simple forms and allowing users a high level of independence with their customization features.         |
| Apple Health App | <ul style="list-style-type: none"><li>• Cool usage of draggable threshold where the user is able to drag directly on the graph.</li><li>• Great simple and easy-to-use visuals.</li></ul>                                                        | <ul style="list-style-type: none"><li>• The druggability is not the most precise movement and it's sometimes hard to get it to be exactly where you want the number.</li></ul>    | Very unique and super user-friendly and great to see all different types of data in a simple and easy-to-understand layout.                                       |

Overall after doing the competitor analysis and looking at my previous research we came up with the conclusion that using a draggable bar was the most usable and exact way a user can manipulate the bar and be able to add threshold and body weight. This is because after looking and seeing many different ways to achieve the same thing we took the best things from all the different similar apps that allowed us to achieve the most usable option.
